

Process of Downloading Mobile Banking Application to your Mobile handset

The Mobile Banking Application can be downloaded using

- (i) Bluetooth
- (ii) Datacable

Using Bluetooth

STEP I Downloading the Mobile Banking Application from website

- On the website www.sbi.co.in click on Mobile Banking under Services. Click on 'Download Mobile Banking Application'. You will be directed to a site for downloading the application.
- Choose your mobile make from the drop down options on the left side and then select your mobile model from the list displayed.
- You will get two options (i) Download application to PC (ii) Download application to mobile
- If you have GPRS connectivity, choose the second option. You will receive a WAP link over SMS. You can download the application by clicking on the link.
- If you do not have GPRS connectivity, choose the first option to download the application to PC/ laptop.
- The mobile banking application which is compatible with the model chosen by you will be saved on your PC.

STEP II Download the Application from PC to mobile handset using Bluetooth

- Install the Bluetooth on the PC/ laptop, if not already available, using the CD provided by the manufacturer.
- Insert the Bluetooth dongle in the CPU. This works like a pendrive.
- Click on the Icon of Bluetooth on Desktop. A screen will open up.
- Please ensure the Bluetooth in your mobile is on and it is visible for other mobile devices
- Click on My Bluetooth and choose Bluetooth Device Discovery
- The mobiles which are in the vicinity of the computer having Bluetooth which is ON will be shown on the screen.
- Right click on the icon of the concerned mobile and choose Pair Device.
- A screen will open up asking for a Passkey. Enter any key of your choice.
- The message will be sent to the concerned mobile and the same key has to be entered there for pairing it with the computer.
- Right click on the mobile icon and choose Refresh Services. The service available for the mobile will be highlighted on the top of the screen.
- Choose Bluetooth Object Push Services and click the right button of the mouse and choose Send Object.
- In the window displayed under files of types at the bottom choose All Files.
- In the screen under Desktop you will find the file that was downloaded from website. It will be labeled SBIFreedom. Choose the same.
- The file will be sent to the chosen mobile. It has to be accepted by the recipient mobile and the file will be downloaded.

Another method of using Bluetooth is explained below;

- Locate the **SBIFreedom** file on the computer and right-click the file icon. Select Send To -> Bluetooth and the mobile phone if it is displayed in the list.
- If the phone is not displayed in the list, select "Other..." -> a window titled "Select Device" appears.
- Select the phone in the list and click "OK".
- Bluetooth file transfer begins.
- **Note:** If the computer has not been previously "paired" as a trusted device with the phone, this needs to be done by setting an arbitrary passkey on the phone and re-typing it on the computer

to authenticate the file transfer.

- On the phone, a prompt may appear requiring authorization of the file transfer. Click “Yes” to receive the file. (This step is skipped if you have set your computer as a trusted device in the phone’s Bluetooth settings)
- A New Message Received indicates the file transfer is complete. Open the message to begin the installation process.
- Switch off the Bluetooth function in the mobile when it is not used as phones are susceptible to virus attacks.

Using Datacable

If your computer is not equipped with Bluetooth, it is possible to transfer the SBI Mobile Application you downloaded from www.sbi.co.in/mobilebanking to your phone over USB using the mobile manufacturer software which came with the mobile. For e.g. use Nokia PC Suite® software if you are using a Nokia mobile to transfer the SBI mobile application to your phone.
